

PHYSICAL SECURITY ASSESSMENT SOFTWARE

Physical security assessments, without the spreadsheets.

Run ASIS-aligned TVRAs across every site, validate evidence with AI, and generate audit-ready reports in minutes instead of weeks. RiskWatch is the physical security assessment software trusted by multi-site enterprise security teams.

TVRA is still a clipboard exercise at most companies.

Walks on paper, photos in camera rolls, findings in PDFs nobody owns. If two of these six cards describe your last assessment cycle, the platform pays for itself.

The clipboard walk

The site walk lives on paper. Findings get typed up days later, when the detail has already faded.

Camera-roll evidence

Photos land in someone's personal camera roll. Matching them to findings is a Friday-afternoon job nobody finishes.

Five regions, five rubrics

Every region scores its own way, so the portfolio comparison the board asks for doesn't actually exist.

Dead zones kill notes

Server rooms, perimeters, and basements have the worst signal on site. Notes wait for the desk, then get reconstructed.

Mitigation dies in email

Findings go into a PDF, the PDF goes into email, and by week three nothing has an owner or a due date.

Audit assembly from zero

CIP-014 or TAPA fieldwork lands and evidence assembly starts from scratch. The same scramble, every cycle.

FROM STANDARD TO SCORED PORTFOLIO

DAY 1

Pick the standard

ASIS Facility Physical Security Control Standards by default. Or FEMA 426/452, NIST 800-53 PE, NERC CIP-014, Martyn's Law, or your own.

DAY 2-5

Walk the site

Mobile TVRA on any device, including the new Android and iOS apps. Photos and comments capture offline and auto-sync on reconnect.

WEEK 1

Score with crime data

Likelihood populates from Cap Index, Security Gauge, and Crisis24. You score impact. The platform calculates risk.

CONTINUOUS

Mitigate and monitor

Findings become tracked tasks for facilities, security ops, or IT. Reassessments trigger on schedule. The Site Risk Index trends across the portfolio.

THE AUDIT PACK SPEAKS

ASIS PS

NERC CIP-014

CFATS RBPS

FEMA 426/452

NIST 800-53 PE

Martyn's Law

C-TPAT

ONE WALK, EVERY OUTPUT

Walk the site once. Output everything.

Cross-mapped by default: one assessment supports ISO 27001 Annex A.7, NIST 800-53 PE, ASIS, NERC CIP-014, C-TPAT, TAPA, Martyn's Law, and HIPAA physical safeguards.

One site walk
61 items · photos attached · scored on the rubric

TVRA score
likelihood from crime data, impact from you

Photo evidence pack
every photo attached to its finding

Mitigation tasks
routed to facilities, security ops, or IT

Audit pack

+ score trend over time

Question library
1,000+ pre-built questions curated by physical-security practitioners. Every question maps to a control standard.

Crime-data overlay
Cap Index CRIMECAST, Security Gauge, and Crisis24 feeds populate per-site likelihood objectively.

Three control domains
Access control, surveillance, and perimeter. Door schedules to camera blind spots to vehicle barriers, every layer scored.

Threats catalog
Intrusion, theft, sabotage, workplace violence, vehicle ramming, social engineering. Pre-loaded.

Suggested remediation
Every non-compliant question carries pre-mapped remediation guidance from the ASIS standard.

Recurring TVRAs
Schedule recurring assessments per site type. Alerts when a site is due, overdue, or off-standard.

Bulk tools
Onboard 200 sites in an Excel paste. Bulk import sites, contacts, regions, and prior findings without IT.

Audit trail
Timestamped log of every score change, finding, attachment, and reassignment. Holds up in regulator review.

Now native on Android and iOS.
The RiskWatch mobile app runs complete assessments offline and resyncs to the platform the moment a connection is detected.

- 1 Full offline assessments**
Score items, capture photos, and add comments with zero connectivity.
- 2 Tasks in the field**
See assigned tasks, run gap analysis, and complete treatment actions on site.
- 3 Automatic resync**
Queued work syncs on reconnect. No export step, no manual upload.
- 4 Most of the web, on mobile**
Create surveys, locations, and users from the app. Same logins, same permissions.

80%
less audit prep time than spreadsheet-run programs

89%
findings closed on time, vs 41% for manual programs

3x
more sites assessed per quarter

4.8 mo
average time to ROI across customers

Live in 30 days, not next quarter.

WEEK 1 · PHASE 1

Scoping

Standards, site portfolio, and data feeds mapped with your named CSM. No outsourced discovery.

WEEK 2-3 · PHASE 2

Configuration

Templates loaded, sites bulk-imported, crime-data feeds connected, owners assigned, SSO live.

WEEK 4 · PHASE 3

Pilot and go-live

First TVRAs run on real sites. 30-day median implementation; 60 to 90 days for large multi-site portfolios.

ALWAYS

Named CSM included

The engineer who answers your email is the engineer who answers your phone call. Most tickets resolve in 4 hours.

We hold ourselves to the frameworks we sell.

RiskWatch holds the same kind of evidence customers trust us to manage: assessment scores, site findings, regulator-facing artifacts. It's protected the way your auditors expect, independently audited, encrypted in transit and at rest, segmented by tenant.
