

RISK MANAGEMENT SOFTWARE

From threat to treatment.

27 integrated risk modules on one record. A Global Register rolls up every risk source, KRIs escalate on threshold breach, and Risk-to-Compliance mapping bakes audit results straight into your risk scores.

BOARD-READY

THE REALITY

Your risk register shouldn't live in eleven spreadsheets.

Registers in workbooks, KRIs nobody watches, board decks assembled by hand. If two of these six cards describe your quarter, the platform pays for itself.

 <p>The workbook register</p> <p>The enterprise risk register is eleven spreadsheets with eleven owners. Consolidation is a quarterly archaeology project.</p>	 <p>Six BUs, six scoring scales</p> <p>Every BU scores risk its own way, so the enterprise rollup compares apples to forklifts. The board notices.</p>	 <p>KRIs nobody watches</p> <p>Indicators sit in spreadsheets where threshold breaches escalate nobody. Breaches surface in the postmortem instead.</p>
 <p>The PowerPoint board pack</p> <p>The board wants the top 10 enterprise risks every quarter. Someone assembles them by hand, from slides, every time.</p>	 <p>Treatment plans without owners</p> <p>The mitigation owner left two years ago and nobody updated the plan. It still says "in progress."</p>	 <p>Risk and compliance, siloed</p> <p>The audit closed five findings last quarter. The risk register has no idea. Two teams, two tools, zero shared record.</p>

FROM REGISTER TO BOARD REPORT

<p>WEEK 1</p> <p>Build the register</p> <p>Load assets with criticality and ownership. Practitioner-built threats and vulnerabilities libraries seed the register, so you never start from blank.</p>	<p>WEEK 2</p> <p>Assess and score</p> <p>Survey-based assessments score every risk the same way in every BU. One rubric, one comparable portfolio.</p>	<p>CONTINUOUS</p> <p>Watch and escalate</p> <p>KRI thresholds watch the numbers between assessment cycles. Breaches escalate on their own, to the right owner.</p>	<p>ON-DEMAND</p> <p>Treat and report</p> <p>Treatment plans carry named owners, due dates, and proof of close. Per-BU dashboards roll up to one enterprise view for the board.</p>
---	--	--	--

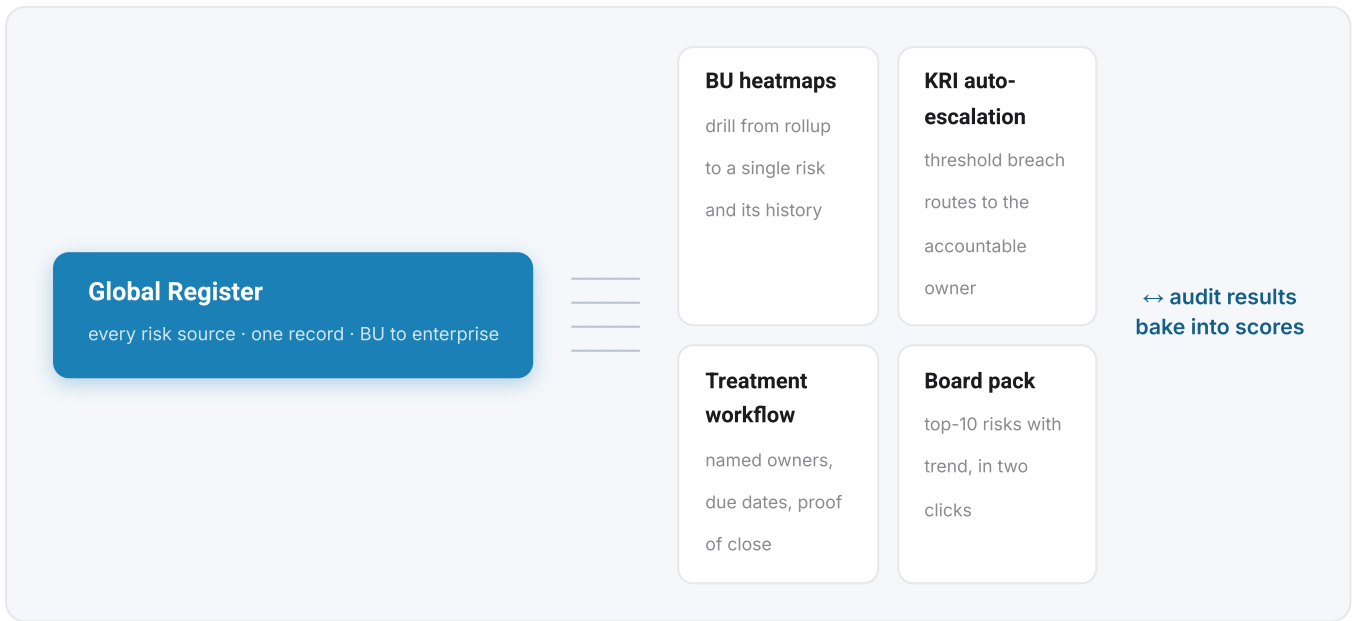

THE GLOBAL REGISTER ROLLS UP

- Enterprise assessments
- Compliance audit results
- Cyber assessments
- Vendor assessments
- Physical security TVRAs
- KRI breaches

Risk and compliance, finally on the same record.

Bi-directional Risk-to-Compliance mapping: audit findings flow back into risk scores, and the register scopes your next control assessment.

<p>Risk assessment engine</p> <p>Survey-based assessments with one standardized rubric, so every BU's score means the same thing.</p>	<p>Asset register</p> <p>Criticality and ownership on every asset, so risk scoring starts from what matters most and who answers for it.</p>	<p>Threats and vulnerabilities libraries</p> <p>Practitioner-built and maintained for 30+ years, originally for federal-agency assessors.</p>	<p>KRI library</p> <p>Build indicators from the library, set thresholds, and let breaches escalate themselves.</p>
<p>Risk-to-Compliance mapping</p> <p>Bi-directional. Audit findings update risk scores; the register scopes the next assessment.</p>	<p>Treatment and recommendations</p> <p>Findings become tracked tasks with owner, due date, escalation, and proof of close.</p>	<p>Dashboards and rollup</p> <p>Per-BU dashboards roll up to one enterprise view. Heatmap by BU, region, or risk source.</p>	<p>Configure without IT</p> <p>Custom fields, templates, My Actions queues, and email rules. Risk teams change them, not consultants.</p>

The register that knows when your last audit closed a finding.

Most platforms bolt risk onto compliance or compliance onto risk. RiskWatch runs both on one record.

<p>1 Findings update scores</p> <p>A closed audit finding lowers the residual score it maps to. Automatically.</p>	<p>2 The register scopes audits</p> <p>High-residual risks pull their controls into the next assessment cycle.</p>
<p>3 One evidence trail</p> <p>Auditors and the board read from the same record, not two reconciled exports.</p>	<p>4 27 modules, one record</p> <p>Assets, threats, KRIs, treatments, and dashboards share the same data model.</p>

<p>16 hrs</p> <p>saved per board-ready report</p>	<p>27</p> <p>integrated risk modules on one record</p>	<p>74%</p> <p>increase in efficiency reported by customers</p>	<p>30 days</p> <p>median implementation with a named CSM</p>	<p>Scan for the ROI calculator with your numbers</p>
--	---	---	---	--

Live in 30 days, not next quarter.

WEEK 1 · PHASE 1

Scoping

Risk taxonomy, BUs, and data sources mapped with your named CSM. No outsourced discovery.

WEEK 2-3 · PHASE 2

Configuration

Register loaded, scoring rubric standardized, KRI thresholds set, owners assigned, SSO connected.

WEEK 4 · PHASE 3

Pilot and go-live

First assessment cycle runs on real risks. 30-day median implementation; 60 to 90 days multi-BU.

ALWAYS

Named CSM included

The engineer who answers your email is the engineer who answers your phone call. Most tickets resolve in 4 hours.

We hold ourselves to the frameworks we sell.

RiskWatch holds the same kind of evidence customers trust us to manage: assessment scores, risk registers, regulator-facing artifacts. It's protected the way your auditors expect, independently audited, encrypted in transit and at rest, segmented by tenant.

NAMED USE CASE

SeaWorld Parks & Entertainment runs its risk assessment program on RiskWatch across 12 parks: physical security, EH&S, rides, and aquatics.

RISK TEAMS RUN ON RISKWATCH

30 minutes, live, no slides.

We protect that timebox, Q&A as we go, and we don't gate the demo by title or pre-qualify your team. Bring your current register export and the rollup the board keeps asking for.
